CPU Socket

Introduction to AM3/ AM3+ CPU

The surface of the CPU has a golden triangle to assist in correctly lining up the CPU for motherboard placement. The **golden** triangle is the Pin 1 indicator.

Important

- Always unplug the power cord from the power outlet before installing or removing the CPU.
- When installing a CPU, always remember to install a CPU heatsink. A CPU heatsink is necessary to prevent overheating and maintain system stability.
- Confirm that the CPU heatsink has formed a tight seal with the CPU before booting your system.
- Overheating can seriously damage the CPU and motherboard. Always make sure the cooling fans work properly to protect the CPU from overheating. Be sure to apply an even layer of thermal paste (or thermal tape) between the CPU and the heatsink to enhance heat dissipation.
- If you purchased a separate CPU and heatsink/ cooler, Please refer to the documentation in the heatsink/ cooler package for more details about installation.
- This motherboard is designed to support overclocking. Before attempting to overclock, please make sure that all other system components can tolerate overclocking. Any attempt to operate beyond product specifications is not recommended. MSI® does not guarantee the damages or risks caused by inadequate operation beyond product specifications.
- While disconnecting the safety hook from the fixed bolt. It is necessary to keep an eye on your fingers, because once the safety hook is disconnected from the fixed bolt, the fixed lever will spring back instantly.

DIMM Slots

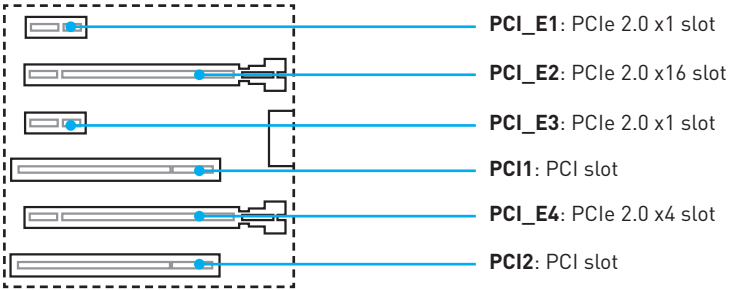

Memory module installation recommendation

Important

- Always insert memory modules in the **DIMM1** slot first.
- Due to chipset resource usage, the available capacity of memory will be a little less than the amount of installed.
- Please note that the maximum capacity of addressable memory is 4GB or less for 32-bit Windows OS due to the memory address limitation. Therefore, we recommend that you to install 64-bit Windows OS if you want to install more than 4GB memory on the motherboard.
- Some memory may operate at a lower frequency than the marked value when overclocking due to the memory frequency operates dependent on its Serial Presence Detect (SPD).
- It is recommended to use a more efficient memory cooling system for full DIMMs installation or overclocking.
- The stability and compatibility of installed memory module depend on installed CPU and devices when overclocking.

PCI_E1~E4 & PCI1~2: PCIe & PCI Expansion Slots

Multiple graphics cards installation recommendation

Important

- For a single PCIe x16 expansion card installation with optimum performance, using the **PCI_E2** slot is recommended.
- When adding or removing expansion cards, always turn off the power supply and unplug the power supply power cable from the power outlet. Read the expansion card's documentation to check for any necessary additional hardware or software changes.

CPUFAN, SYSFAN1~3: Fan Connectors

Fan connectors can be classified as PWM (Pulse Width Modulation) Mode and Voltage Mode. PWM Mode fan connectors provide constant 12V output and adjust fan speed with speed control signal. Voltage Mode fan connectors control fan speed by changing voltage. Therefore, when you plug a 3-pin (Non-PWM) fan to a PWM Mode fan connector, the fan speed will be always maintained at 100%, and that could be noisy.

PWM Mode fan connector

 CPUFAN			
1	Ground	2	+12V
3	Sense	4	Speed Control Signal

Voltage Mode fan connector

 SYSFAN1/3			
1	Ground	2	+12V
3	Sense	4	NC

Controlling the fan speed

There are two ways to manage fan speed. One is to go to **BIOS > HARDWARE MONITOR**. The other is to use **COMMAND CENTER** application.

Both methods offer gradient points of the fan speed that allow you to adjust fan speed in relation to CPU temperature.

JBAT1: Clear CMOS (Reset BIOS) Jumper

There is CMOS memory onboard that is external powered from a battery located on the motherboard to save system configuration data. If you want to clear the system configuration, set the jumper to clear the CMOS memory.

Keep Data

RAID Configuration

Below are the different types of a RAID.

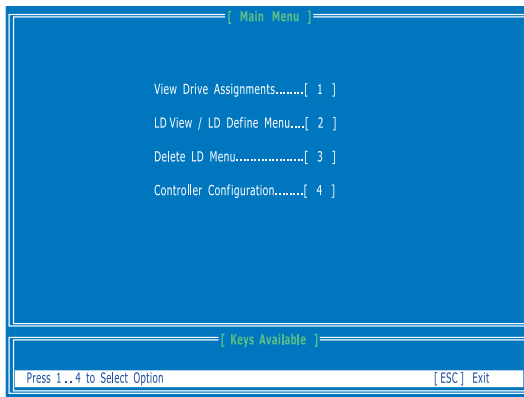

- RAID 0** breaks the data into blocks which are written to separate hard drives. Spreading the hard drive I/O load across independent channels greatly improves I/O performance.
- RAID 1** provides data redundancy by mirroring data between the hard drives and provides enhanced read performance.
- RAID 5** provides data striping at the byte level and also stripe error correction information. This results in excellent performance and good fault tolerance.
- RAID 10** uses four hard drives to create a combination of RAID 0 and 1 by forming a RAID 0 array from two RAID 1 arrays.

RAID level comparison

	RAID 0	RAID 1	RAID 5	RAID 10
Minimum # drives	2	2	3	4
Data protection	None	Excellent	Excellent	Excellent
Read performance	Excellent	OK	Good	OK
Write performance	Excellent	Good	OK	Good
Capacity utilization	100%	50%	67%~(1-1/n)	50%

Using AMD® RAID Option ROM utility

First, you need to set the **SATA mode** to **RAID** in BIOS to create, delete and reset RAID volumes. To enter the RAID Option ROM, reboot and press **Ctrl + F** keys to enter the RAID Option ROM utility during the POST, the following window will appear.

Important

The following procedure is only available with a newly-built system or if you are reinstalling your OS. It should not be used to migrate an existing system to RAID.

Creating RAID Volume

1. Press **2** on the main menu and then press **Ctrl + C** keys. Then following screen appears.

The screenshot shows a blue-themed RAID configuration interface. It is divided into three main sections:

- [LD Define Menu]**: A table with columns for LD No, LD Name, RAID Mode, and Drv. The first row shows LD 1, Logical Drive 1, RAID 1, and 0. Below this are settings for Stripe Block (Gigabyte), Boundary (ON), Fsat Init (ON), Cache Mode, and WriteThru.
- [Drives Assignments]**: A table with columns for Port : ID, Drive Model, Capabilities, Capacity (GB), and Assignment. It lists two drives: 01 : 00 and 02 : 00, both with model ST32000641AS, SATA 6G capabilities, and 2000.39 GB capacity, assigned to 'N'.
- [Keys Available]**: A list of navigation keys: [↑] Up, [↓] Down, [PaUp / PaDn] Switch Page, [Space] Change Option, [Ctrl+Y] Save, and [ESC] Exit.

2. Use the space key to choose a RAID mode (RAID 0/ 1/ 10/ 5) and use the arrow key to move to the **Drives Assignments** window.
 - Stripe Block Size, the default 64KB is best for RAID 0 or 10.
 - Gigabyte Boundary, allows use of slightly smaller replacement drives.
3. On the **Drives Assignments** window, use the **arrow** keys to choose the hard drives which you want to make part of **RAID** volume, and use the **space** key to change the **Assignment** to **Y**. Then press **Ctrl + Y** keys to save the configuration.
4. A message will show, press **Ctrl + Y** to manually input a name as a **RAID** volume name or press any key to save default name.

Please press Ctrl-Y key to input the LD Name or press any key to exit.
If you do not input any LD name, the default LD name will be used.

5. Another message will show, press **Ctrl + Y** keys if you are sure to erase the MBR data of the disk. Or press any key to ignore this option.

Fast Initialization Option has been selected.
It will erase the MBR data of the disks.
<Press Ctrl-Y key if you are sure to erase it>
<Press any other key to ignore this option>

6. The message will show up on the bottom, press any key to use maximum capacity or press **Ctrl + Y** keys to modify array capacity manually.

Press Ctrl-Y to Modify Array Capacity or press any other key to use maximum capacity...

 **Important**

Since you want to create two volumes, this default size (maximum) needs to be reduced. Type in a new size for the first volume. As an example: if you want the first volume to span the first half of the two disks, re-type the size to be half of what is shown by default. The second volume, when created, will automatically span the remainder of two hard drives.

7. The **RAID** creation is done, the screen shows the information as below. Press **ESC** key to return to the main screen.

The screenshot shows the 'LD View Menu' screen with a table of RAID configurations. The table has columns for LD No, RAID Mode, Drv, Capacity (MB), and Status. The first row shows LD 1 with RAID Mode RAID 1, Drv 2, Capacity 1999.99, and Status Functional. Below the table is a 'Keys Available' section with navigation and action keys.
