FUJITSU Uninterruptible Online Power Supply (UPS) Power Protection

Power supply protection for systems and data – powerful and reliable (APC SURT Gen2)

Fujitsu Technology Solutions UPS devices ensure high-performance power supply protection for systems and data, and thus provide reliable protection against power failure, current fluctuations and electrical interference. Fujitsu Technology Solutions offers both line interactive (VI) and online (VFI) devices with double conversion technology in line with the UPS classification according to IEC 62040-3. Capacities of up to 10kVA provide the right power supply and technology for all individual requirements.
The use of uninterruptible power supplies can particularly benefit your company from a financial viewpoint: Having to search for and restore lost or damaged data after a power failure can cost a great deal of time and money. In such incidents UPS helps to protect your data.

Uninterruptible Online Power Supply (UPS)
Fujitsu Technology Solutions VFI (Voltage and Frequency Independent) online UPS devices from APC are the only UPS devices to offer protection against all kinds of faults, such as power failures, frequency fluctuations, voltage swings and peaks as well as low voltage and surges. They also have precise frequency and voltage regulation as well as the Smart Slot interface for integration into SNMP-based network management. Another outstanding feature is the ability to replace used or faulty batteries during ongoing operation without any interruption. All these APC UPS devices can be converted for installation in racks / towers. Fujitsu Technology Solutions not only offers customers a 3-year manufacturer's warranty (door

to door) on the UPS and the batteries, but also optimal integration of the control software into the network management solution ServerView Suite. Support of Windows / Linux and SOLARIS operating systems as well as virtualization layers is provided. In contrast to the VI (Voltage Independent) line interactive and VFD (Voltage and Frequency Dependent) offline versions, the output frequency of the VFI UPS devices is totally independent of any mains, voltage and frequency changes. The mains voltage is permanently rectified in order to then be inverted back to alternating voltage. Hence the rectifierinverter combination, which achieves a constant power supply and a high filter effect. The VFI UPS devices also have a parallel bypass switch which compensates for overloads in problem situations.

Main Features	Benefits
■ Protection against all interference	■ Automatic internal bypass
■ Uninterruptible battery replacement	■ Hot-plug batteries
■ Constant power supply and high filter effect	■ Rectifier-inverter combination
■ Increase in battery autonomy times to hour range possible	■ Additional battery extensions can be connected
■ Battery status and condition on view at all times, also direct setting option on the UPS	■ Intelligent battery management and monitoring of all connected extensions via LCD display

Fujitsu OPTIMIZATION Services

In addition to Fujitsu Uninterruptible Online Power Supply (UPS) , Fujitsu provides a range of platform solutions. They combine reliable Fujitsu products with the best in services, know-how and worldwide partnerships.

Fujitsu Portfolio

Built on industry standards, Fujitsu offers a full portfolio of IT hardware and software products, services, solutions and cloud offering, ranging from clients to datacenter solutions and includes the broad stack of Business Solutions, as well as the full stack of Cloud offerings. This allows customers to select from alternative sourcing and delivery models to increase their business agility and to improve their IT operation's reliability.
